Dear Remediation Team,

As a Blackfoot Valley resident, I would like to provide comment on the alternatives considered in the Repository Siting Study for the Upper Blackfoot Mining Complex.

I support the Section 35 site as the safest, most pragmatic, and cost-effective alternative. Due to the nature of the project—toxic mine waste placement—it is of vital importance to select a site that has little potential to increase contamination to the Blackfoot River and other waterways. This site seems to meet this and other criteria. I urge the team to select this alternative.

Thank you for the opportunity to comment.

Sincerely,

Elaine Caton
